

M-200

CHLORIDE PROCESS | EXTERIOR PLASTICS GRADE

M-200 is a rutile titanium dioxide pigment produced by the chloride process and treated with silica, alumina and organic compounds. It provides high durability, favorable processing rheology and easy dry-powder conveying. Good compatibility and dispersibility in plastic systems make it especially suitable for exterior plastic products.

Applications

- uPVC profiles, plates and exterior furniture
- PVC calendered films, including advertising film
- Durable plastic masterbatch

Key Features

- High durability
- Excellent processing properties
- High color fastness
- Strong anti-chalking performance

Specification	Typical Value
TiO ₂ content, %	92.5
Surface treatment	Silica, alumina, organic compounds
Identification	ISO 591: R2; ASTM D476-84: II(IV)
Rutile content, %	99.9
L*	98.2
b*	1.65
Specific gravity, g/cm ³	4.0
Tinting strength, %	108
pH	8
Volatile (during packing), %	0.3
Acid solubility	0.3
Carbon black undertone (CBU)	13

Storage & Packaging

Storage Conditions

Store in a cool, dry and well-ventilated place. Protect from moisture and direct sunlight.

Packaging Options

Please contact the supplier for available packaging options.

Container Loading

Confirm according to the selected packaging and shipment plan.

Safety Notice

Use good industrial hygiene practice. Avoid dust generation. Please refer to the Safety Data Sheet for more handling information.
