

CR-901

VAPOR-PHASE OXIDATION | HIGH-PURITY GRADE

CR-901 is a high-purity rutile titanium dioxide produced by vapor-phase oxidation. It features low impurity content, a narrow particle-size distribution, good dispersion and stable batch-to-batch quality. It is designed for electronic ceramics, batteries, optical glass, cosmetics, medicine and special metallurgy.

Applications

- MLCC, PTC, VDR and soft ferrites
- Electronic ceramics
- Optical glass and battery materials
- Cosmetics and medicine
- Special metallurgy

Key Features

- High purity and low impurity content
- Stable batch-to-batch quality
- High dielectric constant
- Excellent electrical and semiconductor properties
- Non-toxic, UV-resistant and anti-aging

Specification	Typical Value
TiO2 content, %	99.97
Rutile content, %	99
Specific surface area, m2/g	<6 / 6-8 / 8-10
Volatile matter, %	0.1
Al, %	0.0020
Fe, %	0.0010
K, %	0.0001
Na, %	0.0050
P, %	0.0005

Storage & Packaging

Storage Conditions

Store in a cool, dry and clean place. Protect from moisture and contamination.

Packaging Options

Please contact the supplier for available sealed packaging options.

Container Loading

Confirm according to the selected packaging and shipment plan.

Safety Notice

Use good industrial hygiene practice. Avoid dust generation. Please refer to the Safety Data Sheet for more handling information.

The data included in the typical properties is not a specification. The information in this data sheet is a general guide to the properties of the product described in it. Nothing in this data sheet is to be construed as a warranty, express or otherwise. In all cases, it is the responsibility of the user to determine the applicability of the information and recommendations and the suitability of the products described for its own particular purpose.
